

COMPREHENSIVE SAFETY WITH ATEX BY CONTROLWELL

The current international regulations for machine manufacturers (94/9/EC) and operators (99/92/EC) prescribe high safety levels. Therefore, in addition to the traditional field of electrical engineering, legally compliant explosion protection also considers all relevant mechanical components - in order to avoid all ignition sources, including sparks, which can result from electrostatic charges, or hot spots. The ATEX – IECEx Directive besides taking into account the electrical sources of explosion, also considers potentially explosive concentration of gas, vapour or mist along with dust in the air.

Explosion protection - the danger zones: According to their risk potential explosion-prone rooms and equipment interiors are divided into zones. For gases, vapours and fogs the zone designations are 0, 1 and 2, for combustible dust they are 20, 21 and 22. Category 1 equipment is safe even in case of rare equipment malfunctions and may be used in zone 0/20. Category 2 equipment must be designed so that safety is assured even in case of expected malfunctions and may be used in zone 1/21. Equipment in protection category 3 is safe in normal operations and suitable for zone 2/22.

The use of ATEX cable glands is one of several technical measures to make ignition sources ineffective. The explosion rating plate of a piece of equipment includes the ignition protection type. Versions for increased safety, inherent safety and pressure-resistant enclosure are of particular significance in this context:

- "Ex d" protection - flame proof enclosure
- "Ex e" protection - increased safety
- "Ex i" protection - intrinsic safety

The Controlwell ATEX explosion protection system features high-grade materials. The use of plastics, nickel-plated brass and bright brass guarantees maximum safety.

EXPLOSION PROOF GLANDS & ACCESSORIES

Part JO 77E

EXPLOSION PROOF

POLYAMIDE CABLE GLAND

These Glands are for use with electrical equipment in potentially explosive areas, specially in chemical and petro - chemical industries. These Glands are produced in accordance with 60079-7:2007

Technical Details :	
Material	Polyamide 6
Colour	RAL 9005 (Black)
Threads available	Metric - EN 60423
Protection Class	IP 66 - IP 68 (EN 60529)
Sealing Ring	Neoprene
Dust Guard	Assembled
Temperature Range	-20°C to +80°C
Certificate Number	IMQ 08 ATEX 012 X
Equipment Marking	Increased Safety Ex e II Intrinsic Safety Ex i II 2 GD / Ex tD A21
Suitable for use in	ZONE 1, ZONE 2 for Gas Groups IIA, IIB, IIC for Gas & Dust potentially explosive atmospheres

Size	Cat. No. Black	Thread Diameter (mm)	Thread Length (mm)	Wrench (mm)	Clamping Range (mm)	Standard Pack (pieces)

Ventilation Plugs are used for equalizing the pressure inside and outside the enclosure. The same is achieved with the help of a membrane inside the ventilation plug, which allows for gases (air) to pass through it while blocking liquids and particulate solids (dust).

Applications / Benefits :

- 1) These prevent components inside the enclosure from being exposed to pressurized gases when the enclosure heats up. (By virtue of pressure equalization)
- 2) These also prevent generation of vacuum inside the enclosure when a heated enclosure cools off. (e.g. In luminaires)
- 3) These help maintain IP 68 rating of the enclosure while allowing for the above benefits.

Technical Details :	
Material	Stainless Steel
Equipment Marking	Flameproof Ex e / Ex tb Increased Safety Ex II 2G / EX e IIC Gb / Ex IID tb IIIC Db
Suitable for use in	Gas & Dust potentially explosive atmospheres
Temperature Range	-40 ^o C to +105 ^o C
Protection Class	IP 66
Safety Requirements	EN60079-0 / EN60079-7 / EN60079-31
Certificate No.	IBExU 10 ATEX 1169 U
