

Multi Seal

Multi Seal is a special grommet with multi hole option that is simple to use and require no tools for installation. It differs from conventional grommets as they provide IP 67 protection. They can be installed from one side of the panel without any need for installation of locknuts from the other side as in conventional cable glands. With this grommet necessity of blind stops is removed as in these grommets the opening is always sealed until the membrane is pushed out by the cable. These are suitable for enclosures with wall thickness from 0.5 to 3.5 mm. They are halogen free, weather proof & resistant to chemicals.
