

Panel Mounting Inclined Sockets - CPSA53248

These sockets act as fixed female connectors and can be mated with male plugs. Connectwell inclined sockets are suitable for mounting onto panels which have a ‘recess’ behind them. The inclined sockets ensure that on mating the plugs remain at an angle to the panel surface thereby reducing the total space required for installation.

Technical Data

|                                      |                           |
|--------------------------------------|---------------------------|
| Material                             | Copper Zinc Alloy (MS 58) |
| Voltage Rating (V)                   | 400                       |
| Current Rating (A)                   | 32                        |
| No of Pins                           | 5                         |
| Ingress Protection                   | IP 44                     |
| Connection                           | Screw Connection          |
| Contact Resistance                   | < 1m?                     |
| Suitable Wire Cross Section Stranded | 6                         |
| Suitable Wire Cross Section Solid    | 10                        |
